Questions and Answers document

Q1	<p>We can provide a solution for Object Storage providing S3 repository, dedup, compression and immutable Objects. This solution is software defined and built on pre-engineered configuration and compatible with Veeam as a backup repository but it is not listed on the official Veeam Ready program (which only means that some parameters need to be setup from the storage part rather than Veeam GUI). Can you please advise if such a solution is acceptable?</p>
A1	<p>Accepted</p>
